## Product Profile:

CS771S long range far field antenna is a monostatic antenna for use with CS461 reader for ultra long range high sensitivity tag reading. The antenna has industry leading circular polarization properties to enable best
 read of tags of all orientations as they approach the sweet zone of the antenna. The antenna has excellent beam width and front-to-back ratio.

## Features:

- Industry leading read range performance far field antenna
- Circular polarization, choice of Left Hand Circular Polarized or Right Hand Circular Polarized.

■ Global frequency coverage

- Excellent matching for best read performance
- Excellent circular polarization characteristics for reading tags of all orientations
